# Nucleic Acids

**Information storage**

## Nucleic Acids

- Function:
  - genetic material
    - stores information
      - genes
      - blueprint for building proteins
        - DNA → RNA → proteins
    - transfers information
      - blueprint for new cells
      - blueprint for next generation

DNA

proteins

Cell Nucleus Containing 23 Pairs of Chromosomes

Genes

Chromosomes

Bases

DNA Strand

AP B

## Nucleic Acids

- Examples:
  - RNA (ribonucleic acid)
    - single helix
  - DNA (deoxyribonucleic acid)
    - double helix
- Structure:
  - monomers = nucleotides

DNA

RNA

## Nucleotides

- 3 parts
  - nitrogen base (C-N ring)
    - pentose sugar (5C)
      - ribose in RNA
      - deoxyribose in DNA
    - phosphate (PO<sub>4</sub>) group

Are nucleic acids charged molecules?

Nitrogen base I'm the A, T, C, G or U part!

Nitrogenous base

Phosphate group

Pentose sugar

## Types of nucleotides

- 2 types of nucleotides
  - different nitrogen bases
- purines**
  - double ring N base
  - adenine (A)**
  - guanine (G)**
- pyrimidines**
  - single ring N base
  - cytosine (C)**
  - thymine (T)**
  - uracil (U)**

Purine = AG  
Pure silver!

AP Biology

## Nucleic polymer

- Backbone**
  - sugar to PO<sub>4</sub> bond
- phosphodiester bond**
  - new base added to sugar of previous base
  - polymer grows in one direction
- N bases hang off the sugar-phosphate backbone

Dangling bases?  
Why is this important?

AP Biology

## Pairing of nucleotides

- Nucleotides bond between DNA strands
  - H bonds
  - purine :: pyrimidine
  - A :: T**
    - 2 H bonds
  - G :: C**
    - 3 H bonds

Matching bases?  
Why is this important?

## DNA molecule

- Double helix**
  - H bonds** between bases join the 2 strands
    - A :: T
    - C :: G

H bonds?  
Why is this important?

## Copying DNA

- Replication**
  - 2 strands of DNA helix are complementary**
    - have one, can build other
    - have one, can rebuild the whole

Matching halves?  
Why is this a good system?

## When does a cell copy DNA?

- When in the life of a cell does DNA have to be copied?
  - cell reproduction**
    - mitosis**
  - gamete production**
    - meiosis**

## DNA replication

*"It has not escaped our notice that the specific pairing we have postulated immediately suggests a possible copying mechanism for the genetic material."*

James Watson  
Francis Crick  
1953

1953 | 1962

AP Biology

## Rosalind Franklin (1920-1958)

trends in BIOCHEMICAL SCIENCES

AP B

## Interesting note...

- Ratio of A-T::G-C affects stability of DNA molecule
  - 2 H bonds vs. 3 H bonds
  - biotech procedures
    - more G-C = need higher T° to separate strands
  - high T° organisms
    - many G-C
  - parasites
    - many A-T (don't know why)

AP Biology

## Another interesting note...

- ATP Adenosine triphosphate

- modified nucleotide

- adenine (AMP) + P<sub>i</sub> + P<sub>i</sub>

AP Biology

## Carbohydrates

- Structure / monomer
  - ◆ monosaccharide
- Function
  - ◆ energy
  - ◆ raw materials
  - ◆ energy storage
  - ◆ structural compounds
- Examples
  - ◆ glucose, starch, cellulose, glycogen

AP Biology

## Lipids

- Structure / building block
  - ◆ glycerol, fatty acid, cholesterol, H-C chains
- Function
  - ◆ energy storage
  - ◆ membranes
  - ◆ hormones
- Examples
  - ◆ fat, phospholipids, steroids

AP Biology

## Proteins

- Structure / monomer
  - ◆ amino acids
  - ◆ levels of structure
- Function
  - ◆ enzymes
  - ◆ transport
  - ◆ signals
  - ◆ defense
  - ◆ structure
  - ◆ receptors
- Examples
  - ◆ digestive enzymes, membrane channels, insulin hormone, actin

AP Biology

## Nucleic acids

- Structure / monomer
  - ◆ nucleotide
- Function
  - ◆ information storage & transfer
- Examples
  - ◆ DNA, RNA

AP Biology

Let's build  
some DNA, baby!

AP Biology
